

**IN THE CLAIMS**

This listing of the claims replaces all prior versions of the claims in the application.

1. (canceled)

2. (canceled)

3. (currently amended): A ~~fusion protein composition~~ according to ~~either of claims 1 or 2~~ claim 5, wherein one of the HCV polypeptides is ~~derived~~ from a different strain of HCV than the other HCV polypeptides.

4. (currently amended): The ~~fusion protein composition~~ of claim 3 wherein each of the HCV polypeptides is ~~derived~~ from a different strain of HCV.

5. (currently amended): A composition that activates HCV-specific T cells, said composition comprising:

(a) a fusion protein ~~according to either of claims 1 or 2~~ that comprises HCV polypeptides, wherein the HCV polypeptides consist of an NS3, an NS4, an NS5a, an NS5b and a core polypeptide of HCV; and

(b) a pharmaceutically acceptable excipient.

6. (canceled)

7. (canceled)

8. (currently amended): A composition that activates HCV-specific T cells, said composition comprising HCV polypeptides, wherein the HCV polypeptides consist ~~consisting~~ essentially of:

(a) an isolated and purified NS3 polypeptide of a hepatitis C virus (HCV);

- (b) an isolated and purified NS4 polypeptide of a HCV;
- (c) an isolated and purified NS5a polypeptide of a HCV;
- (d) an isolated and purified NS5b polypeptide of a HCV;
- (e) an isolated and purified core polypeptide of a HCV; and
- (f) a pharmaceutically acceptable excipient; and
- (g) ~~optionally~~ an adjuvant.

9-22. (canceled)

23. (withdrawn-currently amended): A method of activating T cells which recognize an epitope of an HCV polypeptide, comprising the step of:

contacting T cells with ~~a fusion protein~~ the composition of claim ~~2~~ 5, whereby a population of activated T cells recognizes an epitope of the NS3, NS4, NS5a, or NS5b polypeptides.

24. (withdrawn): The method of claim 23 wherein the T cells are obtained from a mammal selected from the group consisting of a mouse, a baboon, a chimpanzee, and a human.

25. (withdrawn): The method of claim 24 wherein the mammal is infected with an HCV.

26. (withdrawn): The method of claim 24 wherein the mammal is not infected with an HCV.

27. (withdrawn): The method of claim 23 wherein the population of T cells comprises CD4<sup>+</sup> T cells.

28. (withdrawn): The method of claim 23 wherein the population of T cells comprises CD8<sup>+</sup> T cells.

29. (withdrawn): The method of claim 28 wherein the CD8<sup>+</sup> T cells express interferon- $\gamma$ .

30. (withdrawn): The method of claim 28 wherein the CD8<sup>+</sup> T cells specifically recognize an epitope of an NS5a polypeptide.

31. (withdrawn): The method of claim 30 wherein the epitope is selected from the group consisting of the epitopes shown in SEQ ID NO:1 and SEQ ID NO:2.

32. (withdrawn): The method of claim 23 wherein the T cells comprise CD8<sup>+</sup> and CD4<sup>+</sup> T cells.

33. (withdrawn): The method of claim 23 wherein the step of contacting further comprises contacting the T cells with an adjuvant.

34-36. (canceled)

37. (withdrawn): The method of claim 23 wherein the T cells are in a mammal.

38. (withdrawn): The method of claim 37 wherein the mammal is selected from the group consisting of a mouse, a baboon, a chimpanzee, and a human.

39. (withdrawn): The method of claim 37 wherein the mammal is infected with an HCV.

40. (withdrawn): The method of claim 37 wherein the mammal is not infected with an HCV.

41. (canceled)

42. (withdrawn): A method of activating T cells which recognize an epitope of an HCV polypeptide, comprising the step of:

contacting T cells with a composition according to claim 8, whereby a population of activated T cells recognizes an epitope of the NS3, NS4, NS5a, or NS5b polypeptides.

43-44. (canceled)

45. (new): The composition of claim 8, wherein one of the HCV polypeptides is from a different strain of HCV than the other HCV polypeptides.

46. (new): The composition of claim 8, wherein each of the HCV polypeptides is from a different strain of HCV.
